Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 6-29, and 31-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Gourraud et al (2004/0006623).

Regarding claims 1-2, Gourraud discloses a method for routing communication requests targeted for a user over a network (see figure 3), comprising: subscribing a network entity (CSCF 216) to presence information of the user (210, 212, 214) (see subscribe message in paragraph 0048, the presence information indicating conditions under which the user may be contacted (see paragraph 0049); receiving at least one notification at the subscribing network entity indicating a state of the presence information of the user (see notify message in paragraph 0049); and creating routing instructions for routing incoming communication requests targeted for the user, based on the state of the presence information (see paragraphs 0040, 0050, and 0063).

Regarding claim 3, Gourraud discloses storing the routing instructions for reference by the network entity upon receipt of the incoming communication requests targeted for the user (see contact database 217 in figure 3 and paragraph 0045).

Regarding claim 4, Gourraud discloses creating a routing script and storing the routing script for reference by the network entity upon receipt of the incoming communication requests targeted for the user (see contact database 217 in figure 3 and paragraph 0045).

Regarding claim 6, Gourraud discloses receiving one or more notifications at the subscribing network entity indicating a change of state of the presence information (see paragraphs 0049, 0083, and 0086).

Regarding claim 7, Gourraud discloses receiving a notification at the subscribing network entity indicating a state of the presence information at the time of the subscription of the network entity to the presence information (see paragraphs 0049, 0083, and 0086).

Regarding claim 8, Gourraud discloses registering one or more terminal applications with the network entity, and wherein subscribing the network entity to presence information of the user comprises subscribing the network entity to the presence information of the user in response to the registration of the one or more terminal applications (see paragraph 0045).

Regarding claim 9, Gourraud discloses publishing the presence information of the user (see paragraphs 0048 and 0049).

Regarding claim 10, Gourraud discloses publishing the presence information via a presence application server (see presence server 232 in figures 3 and 5).

Regarding claim 11, Gourraud discloses subscribing the network entity to the presence information at the presence application server (see presence server 232 in figures 3 and 5).

Regarding claim 12, Gourraud discloses receiving a notification at the subscribing network entity from the presence application server indicating a state of the presence information of the user (see notification message 312 from the presence server 232 in figures 3).

Regarding claim 13, Gourraud discloses the network includes an IP Multimedia core network Subsystem (IMS) network and the network entity includes a Serving Call Session Control Function (S-CSCF) (216), and wherein subscribing the S-CSCF to presence information

Art Unit: 2616

of the user comprises providing a Session Initiation Protocol (SIP) SUBSCRIBE message (308) from the S-CSCF to a presence application server (232) to which the presence information of the user is published (see figure 3).

Regarding claim 14, Gourraud discloses receiving at least one SIP NOTIFY message at the S-CSCF from the presence application server (see notify message 312 in figure 3).

Regarding claims 15-25, claims 15-25 are method claims that have substantially the same limitations as the method claims 1-14. Therefore, they are subject to the same rejection.

Regarding claims 26-29, claims 26-29 are apparatus claims that have substantially the same limitations as the method claims 1, 2, 4, and 13. Therefore, they are subject to the same rejection.

Regarding claims 31-34, claims 31-34 are system claims that have substantially the same limitations as the method claims 1-3, 9, and 13. Therefore, they are subject to the same rejection.

Regarding claim 35, claim 35 is a computer software claim that has substantially the same limitations as the method claim 1. It is subject to the same rejection.

Allowable Subject Matter

3. Claims 5 and 30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Art Unit: 2616

4. Applicant's arguments with respect to claims 1-4, 6-29, and 31-35 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

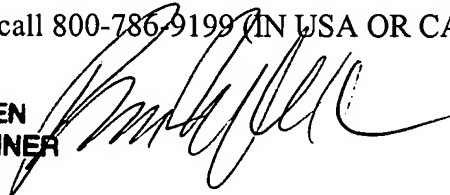

Niemi et al (2005/0170861), Donley et al (2004/0180646), and Adams et al (2004/0156490).
